

STUDENT ASSIGNMENT SHEET

6

Creating Software Instrument Tracks

A software instrument track is a track that uses instrument sounds that are stored in the software. These instruments are selected on each track and can be changed and edited.

Assignment:

Create three software instrument tracks with three different instruments in the software.

Procedure:

1. Open a new file by choosing File > New.
2. Save your file as “Tracks __” (your two initials).
3. Add a new track to the file.
4. Select an instrument for the track.
5. Add a second track.
6. Select a different instrument from the first one.
7. Add a third track.
8. Select a third instrument.
